MARKET DAYS

Wed. 3:00 - 6:00 p.m.
Sat. 9:00 - 1:00 p.m.

Hay Moisture Can Be a Burning Issue

Hay baled at a moisture level that's too high will heat excessively. Small square bales should be baled at 20% moisture or less and large, round bales at 18% moisture or less. Hay temperatures below 120°F is normal and safe, and between 120°F and 140°F is considered a caution zone at which the hay should be closely monitored for 2 to 3 weeks. If the temperature goes above 160°F, fire is likely.
